IC MEETS ITS MATCH

NEW TOYOTA 80V ELECTRIC SOLID PNEUMATIC FORKLIFT.

Never compromise. The Toyota 80V Electric holds its own against mid-level internal combustion trucks, even for rugged, outdoor jobs. Tough enough for construction sites: brick, block and pipe. Concrete. Oil and gas. And the perfect pairing for wineries, orchards and other agricultural applications where internal combustion or diesel emissions may affect the product and tourist experience. With a 4,000–7,000 lb. capacity, the 80V tackles them all. Delivering IC-level performance, with zero emissions.

THE POWER TO CHARGE AHEAD

The 8OV delivers top travel speeds, courtesy of the AC Drive Motor. Its 80-volt battery, largest of any Toyota electric forklift, powers up to a 20% longer runtime, aided by regenerative braking. These and other performance enhancements add up to one big benefit: the power to get more done, more quickly.

EVERYTHING UNDER CONTROL — COMFORTABLY

An excellent driving position and maximum visibility, providing the operator a commanding view of the work environment. Advanced ergonomics reduce fatigue and increase productivity. A compact design makes operating in tighter quarters easier than ever. And Toyota's System of Active Stability with cornering speed control is always ready with extra help when you need it.

STRONG AS THE DAY IS LONG

The 8OV comes with strength, durability, and reliability built right in. All-metal external parts, a reduced-maintenance brush-free motor, and maintenance-free wet disk brakes ensure consistent performance, day after day, week after week. Pneumatic tires provide smooth travel over rough terrain. The new 8OV. Boosts productivity, zeroes out emissions. It's one mean, green machine.
