

We Help You Increase Productivity and Decrease Costs

Through our lean management consulting services

Warehouse lean management is all about eliminating wasted time and effort while maintaining or improving productivity and quality in your operation. Our team will evaluate your current facility and processes, and make suggestions like adding new equipment and automation, changing your warehouse layout and workflow, and implementing new employee training.

Our lean management services will make your operation more efficient, reduce your labor needs, and help your employees be more effective.

Significantly Cut Back on Labor Requirements

With Toyota Automated Guided Vehicles (AGVs)

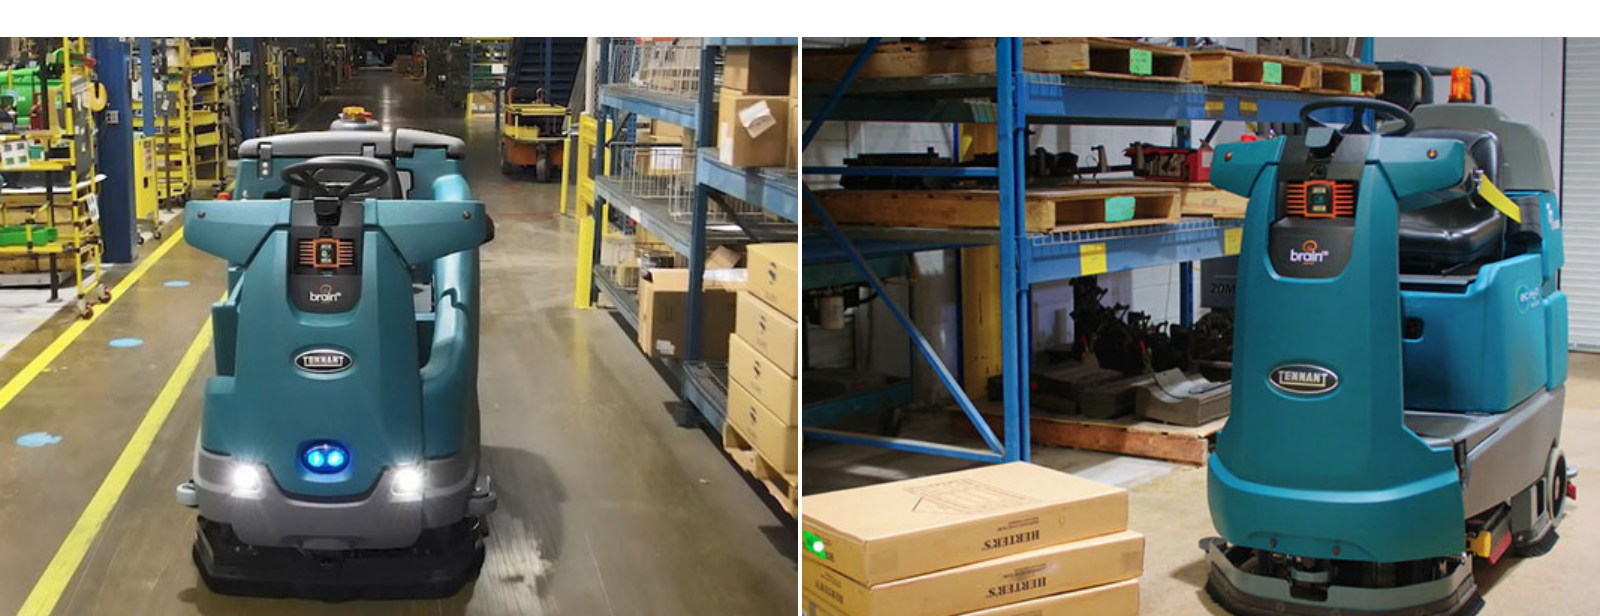

Toyota provides advanced vehicles that can lift, pull, carry, and place everything from pallets to fully assembled products. Utilizing onboard software or magnetic tape technology, their automated carts, forklifts, tugs, and other machines follow predetermined routes, learn your facility, avoid obstacles, and react to the environment.

Toyota AGVs can handle a huge range of repetitive, time consuming tasks, freeing up your employees for higher value activities and making your operation more efficient.

Keep Your Operation Clean with Minimal Input

Using Tennant autonomous floor scrubbers

Ensure consistent, streak free floor cleaning with Tennant autonomous robotic floor scrubbers. They are designed to be completely independent, working without human operators, avoiding people and obstacles, and cleaning facilities around the clock. These scrubbers are the perfect solution for overcoming labor shortages!

Best Practices

Improve Warehouse Efficiency

Implement high quality dock seals and shelters

Your loading bays are where you lose a lot of heat in the winter and cool air in the summer, adding to your energy use and utility bills. By installing dock seals and dock shelters, you can create a tight closure between the truck and your warehouse, preventing air leakage and making it easier to maintain the desired inside temperature.
